

# Brockway Elementary School

Winston, Oregon

Current Exterior View (Under Construction)

Brockway Elementary School  
Paul L. Bentley Architect, AIA PC

Brockway Elementary School represents the first K-3 school to be built in Douglas County in over 30 years and provides a complete state of the art facility. Its expressive colors, shapes, and textures provide a rich and inviting place for children to begin learning. Its outstretched, open plan invites both kids and community to come inside and learn. Interior color schemes direct small children to each pod easily with primary color coordination. Geometric shaped windows highlight the clear-story of the media center. Gymnasium, cafeteria, and media center spaces, which the community uses, are out front and open to the public and yet allow for such use with penetration into the school itself. Additionally, security systems provide the ability to lock down either portions or all of the facility, and full control over visitor entrance and check in procedures. Each learning pod has a grand entrance with color coordinated columns and display areas to proudly show off student work. Common learning areas are open for each pod to share ideas and provide common learning activities for each grade level.

The exterior materials are split face CMU with colored accent bands, standing seam metal roofing and modified built up roofing, aluminum storefront, and fiberglass columns.

This facility is currently under construction with completion nearly 3 months ahead of schedule and is on budget at \$6,200,000.
